# 1 Quickstart with ExtractaFlow

1.1 How to login

When you start ExtractaFlow for the first time you will have a login dialog opened. Populate all the fields in login dialog with your Automic Automation engine credentials, select save connection tick box and if you want a save password tick box. Then press login.

Connection name – a string of your choice to uniquely identify the connection details

Server – the hostname or IP address of the Automic automation engine server. This can be found in Automic user interface INI file. The file named uc4config.xml and located in User interface installation drectory. E.g. c:\Automic\UserInterface\bin

Port – the port of Atomic automation engine. This can be found in Automic user interface INI file. The file named uc4config.xml and located in User interface installation directory. E.g. c:\Automic\UserInterface\bin

Client – the number which represents a client in Automic automation engine

Username – the username to login to Automation engine

Department – the department name to login to Automation engine

Password – the password to login to login to Automation engine

NOTE: client, username, department and password are the same as you normally use to login to Automic user interface.
